

*Fits So Well...
It Disappears*

AXIOM

The Axiom Ankle brace offers **staunch protection** to an injured ankle. But it **disappears** when the game begins.

If an ankle brace is too flexible, you're not protected. If it is too stiff, it's distracting.

- Stable... yet flexible
- Support... without restriction.
- Seamless fit in the shoe... and on the ankle.
- Low ankle/high ankle protection

Prevent inversion & eversion.

You can FEEL the difference when you wear it — or can you?

 Bledsoe™

Engineered to Disappear. Engineered by Bledsoe.

7 Steps to Make an Ankle Brace Disappear.

1. Find the Right Material

Uses a plastic alloy that prevents inversion & eversion, yet flexes with natural movement.

2. Fit, Don't Fight

Separate upper shells allow the material to naturally form to any ankle. The in-shoe foot plate easily heat-forms for a smoother fit.

3. Don't Forget the Syndesmosis

High ankle sprains are more complicated than low ankle sprains. The taller uprights support the high ankle. A second strap supports the syndesmosis.

4. Easy to Apply

An ankle brace must be quick. On and off is easy with innovative ski-buckles.

5. Remember Achilles' Defeat

Eliminate irritating pressure on the Achilles tendon, using a simple cut-out.

6. Eliminate Pressure Points

Center pivot point on the malleolus eliminates pressure and supports natural anatomical movement.

7. Easy to Customize

The unique footplate material is heat formable...at lower temperatures.

Faster. Easier. Safer.
